

DIAMONT

Perfection made simple

The R-M solvent borne basecoat system

DIAMONT is the high performance solution for solvent borne basecoat and clear colours, whether solid, metallic or pearl. DIAMONT's success is clearly proven by its efficiency, ease of use and the clear economic advantages of rapid flash off times and minimum material consumption.

Unfailing simplicity

- DIAMONT is simple to apply as no special technique is required. Its ease of use, throughout the application process, guarantees a perfect finish in all circumstances. As for any possible dust or minor defects, these can be removed in record time with a tack rag.

Greater efficiency, less product

- DIAMONT's excellent covering power proves that the quality of a finish is much more a question of efficiency than the quantity of material used.
